EXECUTIVE SUMMARY

As part of the Transportation Projects Traffic Impact Study (TIS), Kimley-Horn was tasked with studying the top crash locations in Fredericksburg for potential safety improvement projects to include in the overall study. Kimley-Horn evaluated historical crash data for January 1, 2015 through October 29, 2019 within the City Limits Fredericksburg to determine the crash type and frequency at intersections in the city.

Crash locations were identified for further study in coordination with City staff based on crash frequency, severity, and involvement of pedestrians and cyclists in crashes. The following crash locations were selected for further study and are included in this report:

- US 290 at US 87
- Main St at Olive St
- Main St at Goehmann Ln / Highway St
- Main St at Llano St
- Washington St at Walnut St / Granite Ave
- Llano St at Travis St
- Milam St at Austin St

This memo documents the crash type and frequency by year for each intersection listed above and identifies crash patterns at each location. Safety improvements are recommended for implementation pending coordination with TxDOT and Gillespie County and may require further evaluation and design before implementation is possible. This content of this memo will be incorporated into the final report for the Transportation Projects TIS project. Some safety projects may also be included in the preferred investment scenario recommended for Fredericksburg. The remainder of this executive summary documents some safety issues observed generally in the City and safety recommendations identified in the 2017 Transportation Master Plan (TMP).

GENERAL SAFETY OBSERVATIONS

As mentioned in the 2017 TMP, Main Street is recommended to be restriped to remove the center median and gain width in the outer lanes. This improvement is mentioned on page 24 of the TMP. The improvement is intended to improve safety along Main Street by removing conflicts with larger parked vehicles that overhang the parking space striping and are in conflict with vehicles in the outside lanes of Main Street. The existing conditions and proposed improvements along Main St. are shown in Exhibits 1 and 2.

Exhibit 1: Main St. Existing Conditions

Exhibit 2: Main St. Proposed Conditions

Several major highways, including US 87, US 290, and SH 16, could be improved by the addition of left-turn pockets in the existing pavement space. However, drainage must be evaluated to determine if lane reassignments would be feasible.

Many intersections located within the city face issues with large truck (WB-62) turning radii. Turning issues could be improved by relocating stop bars further back from intersections. An example of the truck turning issue was visually observed at the intersection of Adams St with Main St on November 4, 2019 when a truck failed to make an eastbound right turn from Main Street to Adams Street to the south due to conflict with a left turner at the stop bar. Exhibit 3 shows the path that a WB-62 truck would need to take to maneuver this turn without tracking over curbs or pedestrian ramps.

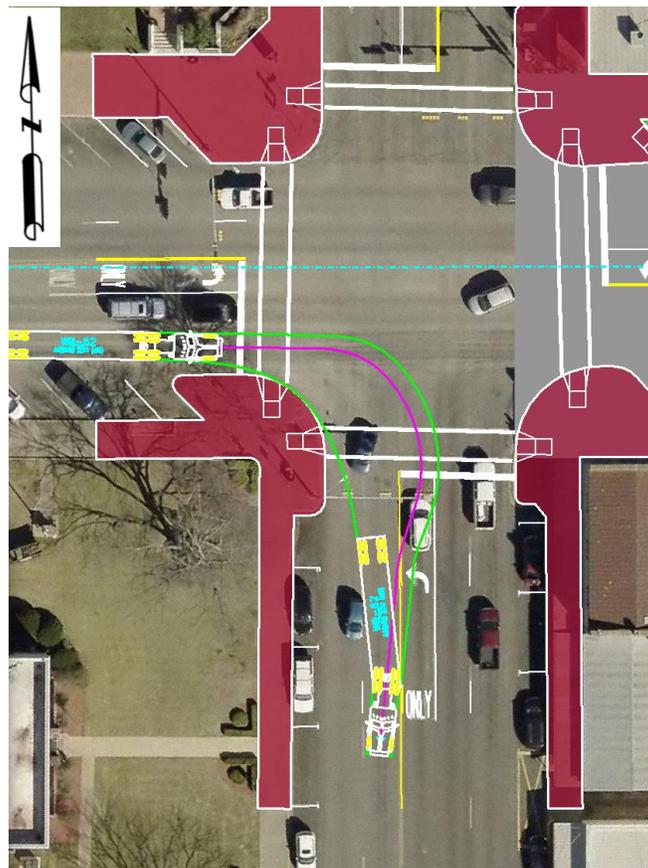

Exhibit 3: WB-62 Turning Radius for an Eastbound Right at Adams and Main

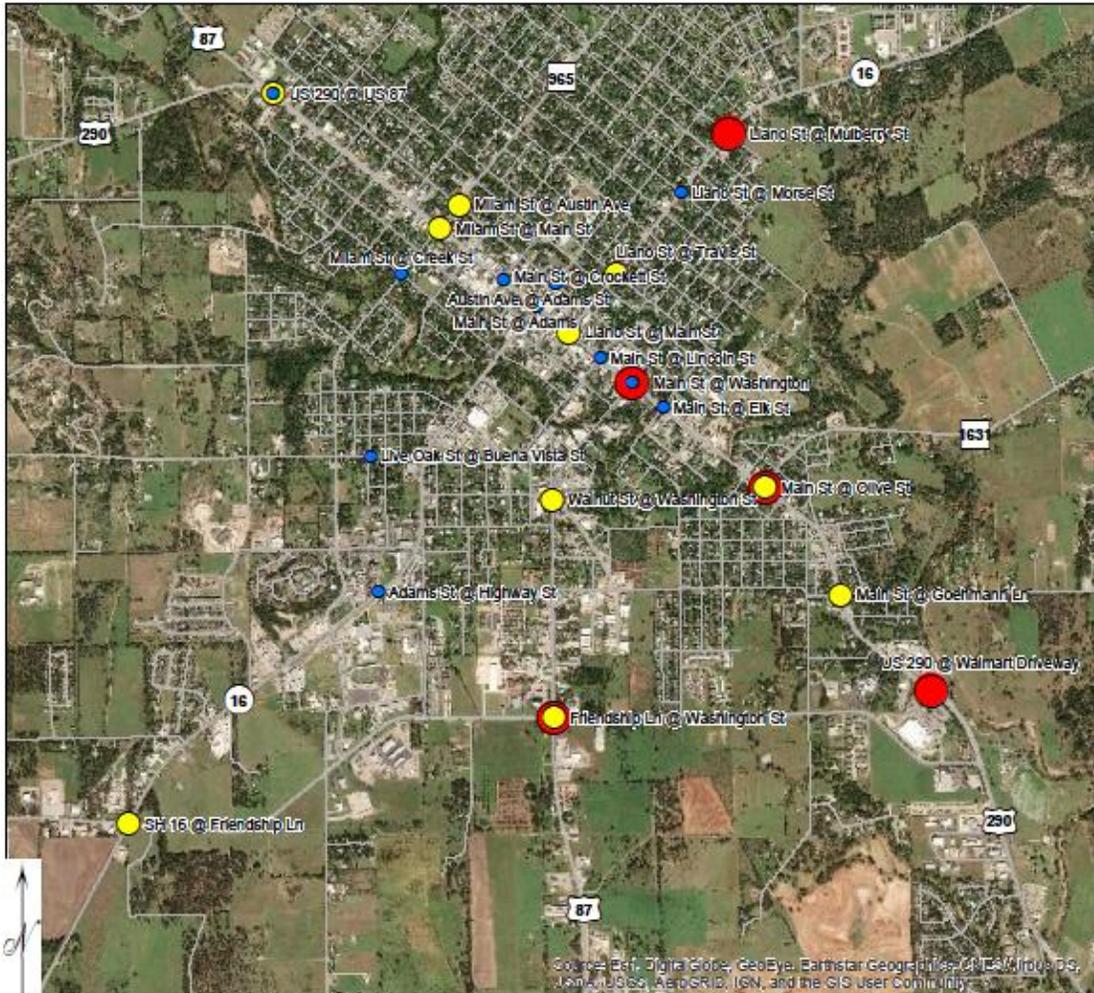

The costs associated with implementing the safety improvements recommended in the Fredericksburg TIS Safety Memo dated December 4, 2019 are shown below in Table 1. Costs in the “Other Improvements” column have calculations shown in Appendix A.

Table 1 – Costs of Safety Improvements

Intersection	Restriping	Remove Markings	Swap Signal Head	Install Sign	Other Improvements	Total
US 290 at US 87	1 x \$5,000				\$14,980	\$27,480
Main at Olive	1 x \$5,000		1 x \$10,000			\$15,000
Main at Goehmann	2 x \$5,000				\$7,545	\$27,545
Main at Llano	2 x \$5,000	1 x \$2,000		1 x \$500		\$7,500
Washington at Walnut					\$153,995	\$153,995
Llano at Travis			1 x \$10,000			\$10,000
Milam at Austin	4 x \$1,250			2 x \$2,500 (LED)	\$20,150	\$30,150

The following map and corresponding table in Exhibit 4 show crashes within the City Limits of Fredericksburg with the highest 10 frequency crash locations, fatalities, and pedestrian and bicycle crashes highlighted within the map. The table shows crash frequency at the top 10 most frequent crash locations. The remainder of this report documents the seven (7) locations identified for further study in coordination with City, TxDOT, and Gillespie County staff.

RECOMMENDATIONS:

1. Modify medians to restrict access at site driveways
2. Add “puppy tracks” for eastbound left turn lane, and add an island to force left turn lane vehicles to go left
 - There were 9 eastbound rear ends on US 290 at US 87

See **Figure 1** for clarifications to recommendations.

RECOMMENDATIONS:

1. Restripe left turn lane on Main St
2. Convert left turn lanes from Main to Olive to a protected-only phase

See Figure 2 for clarifications to recommendations.

RECOMMENDATIONS:

1. Widen Main St to accommodate left turn pockets and remove split phasing
2. Redirect Whataburger traffic to force an exit at Highway St rather than Main St, using delineator sticks (Exhibit 5) or a porkchop median (Exhibit 6) on Main St

See Figure 3 for clarifications to recommendations.

Total Collisions Reported	10	11	9	7	12	49

RECOMMENDATIONS:

1. Remove on-street parking on Llano southbound for the first half of the block
2. Create right-turn bay from removed parking – 100' full + 50' taper to store 4 vehicles
3. Add lane assignment stripes and a sign on the mast arm on southbound Llano
4. Add a double yellow centerline on northbound Llano
5. Add a leading left protected phase on northbound and southbound Llano

See Figure 4 for clarifications to recommendations.

Total Collisions Reported	5	4	6	2	7	24

RECOMMENDATIONS:

1. Generally, reduce conflict points at intersection by closing off or re-orienting some access and provide either a center turn lane or raised median through curve area on Washington Street.

See Figure 5 for general recommendations

Same Direction – One Straight – One Right Turn	0	0	0	2	0	2
Total Collisions Reported	2	3	3	7	7	22

RECOMMENDATIONS:

1. Add a northbound left-turn only phase (over half of crashes at this intersection were collisions between left-turn and through traffic)
2. To address pedestrian crossing issues, convert westbound lanes to a through-left lane and a right-turn lane, and convert eastbound lanes to a left-turn lane and through-right lane.
3. Study corners to make ADA compliant for landing areas and crossing button access.

See Figure 6 for clarifications to recommendations.

RECOMMENDATIONS:

1. Evaluate an all-way stop warrant with city-provided count data
2. Upgrade stop signs to have flashing LED's on Austin Street (solar powered)
3. Add edge lines on intersection corners for buffer around drainage structures
4. Address drainage structure and pedestrian issues by directing vehicles away from drainage structures and adding high-visibility pedestrian crosswalks

See Figure 7 for clarifications to recommendations.

See Appendices B, C, and D for three recent crash reports at this intersection.

See Appendix E for Milam at Austin multi-way stop warrant. An all-way stop (or “mutli-way”) is warranted and recommended for this location for installation. See Appendix F for Milam at Austin signal warrant. A signal is not warranted at this location due to volumes despite high crash occurrence.
